Yunyu Hu 胡芸毓

Engineer with a research background in human-AI interaction, building across embedded robotics, computer-vision prototypes and interactive software (Unity, web). Comfortable owning a project end-to-end — mechanism, sensing and the software that ties it together.

My M.S. research is on how AI systems should communicate intent to build user trust — that same question runs through every project I build, whether it's a robot's control logic or a game's interaction loop.

SELECTED PROJECTS

M.S.

M.S. Thesis — Human-AI Trust & Collaboration
In progress

NCCU

- Independently designed intention-signaling cues and an experimental system for human-AI collaboration, examining how intention communication affects trust and collaboration outcomes, and translating the findings into AI interaction design recommendations.

JL

Jellyfish & Lizard Robots
2026

Tsinghua University, Future Lab

- Designed and built two character robots — a soft tentacle-based jellyfish and an Arduino-driven lizard with a moving mouth/tongue mechanism — covering mechanical design, actuator wiring and control logic.

MM

Memory Maze
2026

Unity

- Built an interactive memory-maze experience in Unity exploring spatial narrative and player memory paths.

WG

WallGuard — AI Wall-Hazard Detection
2024

YOLO · Exhibited at InnoFest@ICI

- Implemented a YOLO-based real-time recognition pipeline for building-wall damage and connected it to a generative API for scenario-specific reporting.

ToA

Tears of Ancestors — 2D Game
2023

Competition finalist

- Narrative 2D game set against tribal history, combining exploration and combat mechanics; wrote the game script and dialogue design guiding players through the ancestors' story and conflict as they move through memory scenes.

DL

DeepLink
2021 – 2023

Industry-academia capstone

- Built a webinar-based digital portfolio platform end-to-end; adopted as an ongoing departmental platform after graduation.

RESEARCH

- Invited representative, **2025 SNU–UTokyo–NCCU Joint Symposium**, Seoul (Nov 2025)
- Presenter, **TAICHI'25 / InclusiGen** — 11th Annual Conference of the Taiwan Association of Computer-Human Interaction (Aug 2025)
- **Best Demo, TAICHI 2024** — FlexiTouch (soft-material touch/pressure interaction, sensor + microcontroller build)

EXPERIENCE

National Chengchi University — TA, Human-Computer Interaction Design — 2025–2026

Taiwan Design Research Institute (TDRI) — Design R&D Intern — 2025

FreeSEED R2 — UX Designer — 2025

National Chengchi University — TA, Design Thinking & AI — 2025

OpenHCI 24th — Technical TA, Unity AR + LED + sensor project — 2024

MR Creative Lab (Prof. Chia-Nien Chou), NCCU — Research Assistant — 2024

Media Psychology Lab (Prof. Rih-Suan Lin), NCCU — Research Assistant — 2023

PTSC (Pershing Technology Services) — FinTech Intern — 2023

National Chengchi University — TA, Mobile App Development — 2022

Fu Jen Catholic University, Dept. of Information Management — Computer Lab Assistant — 2021

yunyu-web-digital-profile.vercel.app

sandyfuoo68@gmail.com

Taipei, Taiwan

SKILLS

Languages
Python, JavaScript, C, Java, PHP

Frameworks / Platforms
React, React Native, Unity, Firebase, AWS, MySQL

Hardware / Tools
Arduino, Figma, Git

ML / Vision
YOLO object detection, parametric & generative modeling

EDUCATION

National Chengchi University
M.S. Digital Content & Technologies
2023 – Present

Tsinghua University
Exchange – Info Art & Design (Future Lab)
Jan – Jun 2026

Fu Jen Catholic University
B.S. Information Management · GPA 3.8
2019 – 2023

AWARDS

TAICHI 2024 — Best Demo, FlexiTouch

League of VR Final 2024 — Best Technical Award

InnoFest@ICI 2024 — WallGuard exhibitor

Taiwan Collegiate Game Design Competition 2023 — Finalist, Tears of Ancestors

National Collegiate Innovation Competition 2022 — 1st Place (IPv4), DeepLink
