yunyu-web-digital-profile.vercel.app

Information management graduate and M.S. student in Digital Content at NCCU, focused on human–AI collaboration and skilled in user research, experiment design, system development and data analysis. For my thesis I built a **pygame + FastAPI experiment system** that captures event-level behavioral logs, and a **Streamlit analysis dashboard** for data cleaning and merging, behavioral feature engineering and statistical testing. Winner of **TAICHI 2024 Best Demo**.

Experience

Teaching **HCI Design Teaching Assistant** · National Chengchi University — Sep–Dec 2025, Sep 2026–Present

- Supported **35 teams (139 students)** over two semesters in user research, prototyping and usability testing.

Industry **Design R&D Intern** · Taiwan Design Research Institute (TDRI) — Jul–Aug 2025

- Integrated AI APIs for **review sentiment analysis and text classification**, producing structured labeled data, and benchmarked AI tools to map collaboration scenarios.

Industry **UX Designer** · FreeSEED R2 (Taiwan local LLM project) — Mar–Jul 2025

- Led the community homepage redesign and community games, delivering **interactive prototypes** for team discussion of interface, interaction needs and implementation.

Teaching **Design Thinking & AI Teaching Assistant** · National Chengchi University — Feb–Jun 2025

- Supported about **50 students** building AI applications, guiding prototyping and debugging.

Research **Research Assistant** · MR Creative Lab, NCCU — Jan–Jun 2024

- Built **AR interactive prototypes** with 8th Wall (WebAR) and Unity and reviewed related literature.

Research **Research Assistant** · Media Psychology Lab, NCCU — Sep 2023–Feb 2024

- Supported a medical news game study and a VR awe study, handling participant recruitment, sessions and data organization.

Industry **Fintech Intern (Full-stack)** · Pershing Technology Services Corporation (PTSC) — Jan–Aug 2023

- Wrote IA documents and UI specs for a **banking project**, implemented front-end and back-end features and proposed improvements.

Selected Projects

Master's Thesis | Coordination Intent in Human–AI Collaboration — 2026

Does two-way communication help humans and AI coordinate? A 2×2 study with 60 participants compared whether each side could signal intent; I captured event-level logs with a custom system, merged them with survey data, engineered behavioral features such as signal timing and responses, and ran statistical tests. Signaling raised trust, but two-way communication did not guarantee coordination, leading to design guidelines such as confirmation and handover cues.

FlexiTouch | Soft-Material Interactive Controller — 2024

Soft-material controller sensing press and stretch to drive in-game visual and haptic feedback. TAICHI 2024 Best Demo; League of VR Best Technical Award.

WallGuard | AI Wall-Hazard Detection — 2024

Real-time YOLO detection of wall damage with plain-language risk reports written by generative AI. Exhibited at InnoFest@ICI 2024.

NHI App Redesign & AI Design-Process Study — 2025

Proposed an IA redesign and proactive reminders from user research; tested generative AI in design work and found it suits card sorting but struggles with nuanced user needs.

Education

National Chengchi University
M.S., Digital Content and Technologies
2023–2026

Tsinghua University, Beijing
Exchange Study, Information Art & Design (Future Lab)
Jan–Jun 2026

Fu Jen Catholic University
B.S. in Information Management | GPA 3.8
2019–2023

Skills

Programming & Systems
Python, JavaScript, React, React Native, FastAPI, Unity, Arduino, MySQL, Firebase, AWS, Git

Data & AI
Event logging, data cleaning & merging, behavioral feature engineering, statistical testing, Streamlit dashboards, YOLO detection, generative AI APIs, sentiment & text classification

Research & Design
Experiment design, survey design, user research, service design, information architecture, Figma

Research

2025 **SNU–UTokyo–NCCU Joint Symposium**
Presented for NCCU in Seoul

2025 **TAICHI'25 (Taiwan HCI Conference)**
Thesis research framework

2021 **TANET / NCS Conference**
Two papers accepted and presented

Awards

2024 **TAICHI Best Demo**
FlexiTouch

2024 **League of VR, Best Technical Award**
FlexiTouch

2024 **AI Junior Award Finalist**
iHarbor

2023 **Collegiate Game Design Finalist**
Tears of Ancestors

2022 **Info. Application Innovation, 1st Place**
DeepLink (IPv4 track)
